Pinnacle Awards

for Engineering & Product Innovation

Innovations that have enabled Cisco to move into new markets.

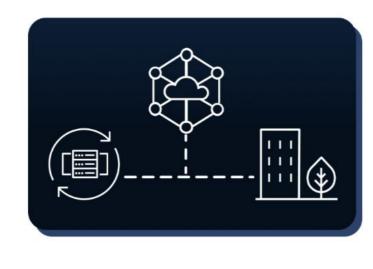

**Strategic Impact** 

Winner videos coming October 2024 - Watch this space!

### **Strategic Impact Winners**

### **Catalyst SD-WAN Cloud OnRamp**

**Encrypted Traffic Visibility and Security using EVE** 

Catalyst SD-WAN Cloud on Ramp capabilities provide value for customers in their journey toward consuming the cloud applications in their networks.

The Catalyst SD-WAN Cloud on Ramp solution has the following value propositions: unified solution across heterogenous clouds; discovery; automation and reliability; security and segmentation of traffic; intelligent application-aware routing; end-to-end visibility and telemetry; autoremediation capabilities, and more.

Learn more: Catalyst SD-WAN Cloud OnRamp

value proposition of network firewalls by impeding application identification and threat detection. The Encrypted Visibility Engine (EVE) addresses this problem by operating without decryption, instead using a lightweight AI/ML classifier to identify client applications, malware communications, and MITRE ATT&CK techniques.

EVE also helps prevent Loss of Visibility by allowing defenders to detect

Encrypted DNS and unsanctioned proxies and identify applications like VPNs and remote access software in encrypted traffic. In addition to TLS and QUIC, EVE can operate on HTTP, to see for all these use cases. EVE operates on the initial message of each session, allowing its findings to be used to enforce policies in the data plane. It is implemented in the Cisco Firewall as a Snort 3 plugin, but integrations are underway to utilize it across the Cisco portfolio to ensure consistent security outcomes. Its classifier is trained on an unparalleled data pipeline, which processes 1B+ unlabeled sessions, 100M+ labeled sessions, and 10K+ malware sessions daily from Secure Malware Analytics. The data pipeline is automated to adopt new emerging threats and applications without much effort.

### Congratulations to the 2024 Winning Team Members!

# **Strategic Impact Finalists**

# **ThousandEyes Open Integrations Platform**

ThousandEyes' Open Integrations Platform empowers organizations with deep network visibility and seamless integration into operational workflows. It offers automation through Custom Webhooks and streamlined data management with OpenTelemetry, thus enhancing operational efficiency and positioning Cisco as a leader in adaptable operational intelligence solutions.

#### video devices business with a 22% increase in bookings and expanded market reach while reinforcing Cisco's dedication to interoperability and customer-focused innovation.

### **Quantum-Safe Networking with** Cisco SKIP

Cisco's integration of the SKIP protocol and related technologies into its products offers a pioneering quantum-safe solution that protects against future quantum threats, influencing industry standards, and driving a \$100M revenue impact while supporting a growing ecosystem of key management systems and securing a range of Cisco devices.

#### ThousandEyes Internet Insights: Real-time, **Data-driven View of Widely Used Networks** and Applications

Internet Insights by ThousandEyes provides deep visibility into internet

outages, offering intelligence beyond individual tests to identify broader failure patterns and rapidly resolve incidents. The ThousandEyes Internet Outage Map offers a data-driven, publicly accessible live view of global outages, significantly enhancing hybrid workforce productivity and marketing impact.

# **Network Assurance Data Platform**

The Network Assurance Data Platform is a cloud-based ecosystem enabling Cisco engineering teams to efficiently develop and scale AI/ML solutions for complex network management, providing services for data management, model training, and operational visibility, while ensuring compliance with privacy and security standards, leading to its adoption by 180 engineers and usage by over 5000 customers, driving a 60% annual growth rate in application deployment.
